

For over 14 years, our ARRA certified EHR, Team Chart Concept (TCC), has been a complete solution for providers. We're proud to announce TCC 2014, which will be released in January 2014. It is a professional software application designed by doctors, nurses and billing specialists to serve their needs first and foremost. Much like Microsoft Office 2010, TCC employs a 'ribbon interface' for fast, rapid access.

### 3 easy steps get you started with TCC 2014:

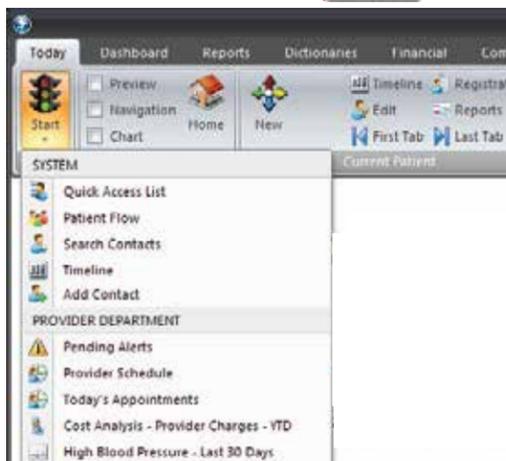

**Step 1** – Press the 'Start' button.

Pressing the 'Start' button displays a list of workflow tasks (You can customize this list).

**Step 2** – Select a task to find one patient or a list of similar patients.

The list of patients relevant to the workflow task appears on the left side of the screen; the active patient's chart appears on the right.

**Step 3** – Start working. Once on the patient chart, colorful icons and tabs quickly lead you to the information you need.

Once you get started with TCC 2014 you can do any of the following (and much more):

Schedule appointments for one or more providers, at one or more locations, and easily manage schedules with TCC 2014's comprehensive scheduler.

As patients arrive for their appointments, track their movement through your office in real time to ensure an orderly flow of patients with no bottlenecks.

Rapidly build professional documentation in TCC 2014 (and/or Microsoft Word) using templates that you can maintain and drive from within TCC 2014.

Automate the creation of patient-specific graphs based on lab test results received through bi-directional lab interfaces.

Define alerts to automatically warn you if values from vital signs, lab test results, and other patient-specific records exceed pre-defined thresholds

Define orders to proactively manage disease protocols, alert processing, health maintenance plans, and any other patient-specific events.

Send electronic prescriptions directly from TCC 2014 to the patient's pharmacy with full drug-to-drug and drug-to-allergy checking built in.

Remind the patient of upcoming appointments via automated third party phone systems and/or third party patient portals.

Scrub insurance claims using automated coding reports to target optimal reimbursement and the highest possible chance of a clean claim on the first submission. TCC customers maintain a 95 to 98% clean claim rate.

Post payments electronically using the latest ASCII X12 file formats (5010), and offer credit card payment options to your patients.

Monitor the financial health of your practice with one-click reports and dashboards

Send and receive medical information with Health Information Exchanges and other organizations (e.g. state and national cancer registries).

Keep your medical data where you want – on servers in your office or hosted by an Ulrich Medical certified hosting vendor.

If desired, outsource your billing and revenue cycle management needs to Ulrich Medical. Visit [www.ulrichbilling.com](http://www.ulrichbilling.com) for more information.
